January 2019: First Interim Report Of Premier’s Council on Improving Healthcare and Ending Hallway Medicine

Publications
Hallway Health Care: A System Under Strain
First Interim Report from the Premier’s Council on Improving Healthcare and Ending Hallway Medicine
CONQUER

00:00 02:26

However, in the light of this so-called "pandemic", that previous issue seems to have been scrubbed from the media, and from political talking heads. Prior to this, apparently there were no serious health care issues.

The Ontario Science Table and various "TV experts" would have you believe that hospitals are overwhelmed because of a virus (that has yet to be isolated). Countless "non essential" health care services have been cancelled in the name of freeing up space to accommodate anticipated death waves.

Read the 1st report for yourself, but it's quite telling:

> Key Findings
> 1. Patients and families are having difficulty navigating the health care system and are waiting too long for care. This has a ***negative impact on their own health and on provider and caregiver well-being***.
> 2. The ***system is facing capacity pressures today***, and it does not have the appropriate mix of services, beds, or digital tools to be ready for the projected increase in complex care needs and capacity pressures in the short and long-term.
> 3. There needs to be more effective coordination at both the system level, and at the point-of-care. This could achieve better value (i.e. improved health outcomes) for taxpayer money spent throughout the system. As currently designed, the ***health care system does not always work efficiently***

Chapter 1: The Patient Experience

Patients and families are having a difficult time navigating the health care system. Ontarians ***cannot always see their primary care provider when they need to, wait times for some procedures and access to specialists and community care are too long, and emergency department use is increasing. A lack of early intervention and prevention is contributing to more patients becoming ill***. All of these challenges are connected to the problem of hallway health care.

.

Chapter 2: Stress on Caregivers and Providers

Health care providers, family members, and friends are feeling the strain of a ***system that isn't making caregiving easy***. This leads to high levels of stress and places a heavy burden on caregivers to act as advocates for timely and high-quality health care services.

.

Chapter 3: Different Health Care Needs

There are ***more patients with complex needs*** and an increase in chronic issues that require careful and coordinated management, like an aging population living longer with high rates of dementia. Fair access to health care across the province continues to be a concern.

.

Chapter 4: Immediate and Long-Term Capacity Pressures

Ontario does not have an adequate or appropriate mix of services and beds throughout its health care system. This leads to capacity pressures on hospitals and long-term care homes. Demographic projections indicate there will be additional strain on existing capacity in the near future.

.

Chapter 5: Responsibility and Accountability in the System

Ontario's health care system is large. Responsibility for coordinating high-quality health care is spread across many government agencies, organizations, and the Ministry with no clear point of accountability to keep the focus on improving health outcomes for Ontarians. There is a fundamental ***lack of clarity about which service provider should be providing what services to patients and how to work together effectively***. Ontario could be getting better value for the money it currently spends on the health care system.

Looks pretty serious. Keep in mind, this was 2018/2019, and the consensus even then was that Ontario hospitals were overflowing.

Adalsteinn Brown

Adalsteinn (Steini) Brown is the Dean of the Dalla Lana School of Public Health at the University of Toronto. Previous experience includes senior leadership in policy and strategy in the Ontario government, founding roles in start-up companies, and global work on how to measure performance in health care. He studied government at Harvard University and Public Health at the University of Oxford.

Adalsteinn Brown
DPhil, AB

Co-Chair
Dean, Dalla Lana School of Public Health, University of Toronto
Senior Fellow, Massey College

Adalsteinn Brown was part of the Premier's Council on Improving Healthcare and Ending Hallway Medicine. Their 2019 report concluded that Ontario hospitals didn't always run efficiently, and there weren't enough reasons.

Fast forward a year or 2. That same Adalsteinn Brown now runs the Ontario Science Table. The group is claiming that coronavirus cases are responsible for Ontario hospitals being overwhelmed.

This previous Committee work seems to have been completely swept under the rug, as it doesn't fit with the present narrative.

Our response:

In processing your request we liaised with colleagues within Public Health as they would hold the information in relation to your request were this information to be held by the council.

We can confirm that the information you have requested is not held by the council.

The council does not hold any documents describing the purification of any Covid-19 virus, including variants.

Ontario's Most Overcrowded Hospitals
Days over 100% capacity, Jan-June 2019 (181 days)
Richmond Hill Hospital 179
Peterborough Regional Health Centre 176
Greater Niagara General Hospital (Niagara Falls) 176
Hamilton General Hospital 172
Southlake Regional Health Centre (Newmarket) 170
Health Sciences North (Sudbury) 168
Ajax Pickering Hospital 167
Centenary Hospital (Scarborough) 167
Oshawa Hospital 167
Guelph General Hospital 148
news

Even as late as January 2020, it was being reported on that Ontario hospitals were already overwhelmed. In face, CBC referenced a specific campaign promise Ford had made back in 2018 on this issue. CBC's own investigation had concluded the same thing: that Ontario health care was pushed to its very limits.

From the CBC's own work, it was shown that many hospitals were over 100% capacity, nearly every single day. This is a serious problem.

However, once the "global pandemic" hit, all talk about this seemed to stop. Instead, hospitals were being overwhelmed by waves of sick and dying "Covid" patients. That was the new narrative.

Hospitals across Canada — not just Ontario — responded by cancelling thousands of preventative, screening, and non emergency procedures. The health care system stopped taking care of the people it didn't have the capacity to anyway. An interesting way to end hallway medicine. Just cancel services and end the backlog.
